

To improve the Bay-Delta science process, ISB should ensure:

1. There is rigorous review of science that is the basis for Bay-Delta management and regulation
2. There is an ongoing stakeholder-involved process to resolve or narrow contentious science issues
3. The Delta Science Program to produce, under the auspices of the ISB, a regular, updated report on synthesis of Bay-Delta science using an open, responsive process
4. An open process to identify best available science specific to important regulatory processes and to assess its adequacy for that purpose
